

COMMERCIAL OFFER:

export of sunflower pellets for Drax Power Plant (Selby, Great Britain)

European Energy Company, LLC (ID 39698497) was founded on March 18th 2015 on the peak of development of alternative energy sphere in Ukraine. Since then the company has been offering turnkey solutions for heating as well as hot water supply to state and private institutions, organizations as well as enterprises.

We use wood, wood chips, briquettes and sunflower pellets as the renewable source of energy to run the heat generating stations.

Our company was able to form a closed cycle for production of heat by uniting heat generation, supply of biomass and running of heat power units under one roof.

At present, we are looking for the opportunity to export the surplus of sunflower pellets, which is being formed on a monthly basis, to Drax Power Plant (Selby, Great Britain) as well as to learn foreign experience in transforming coal electrical power generation to biomass.

Sunflower pellets, which are offered for export (HCDCS code – 23063000), have following features:

Standard ISO 1928 (solid fuel) – determination of gross calorific value		Wr, % (moisture content, working condition)	9,4
		Ar, % (ash content, working condition)	1,35
		Ad, % (ash content, dry condition)	1,49
Qir, kcal (lower calorific value, working condition)	4144	Sr, % (sulphur, working condition)	0,13
Qid, kcal (lower calorific value, dry condition)	4635	Sd, % (sulphur, dry condition)	0,14
Qsr, kcal (upper calorific value, working condition)	4459	Vr, % (flying particles, working condition)	70,02
Qsd, kcal (upper calorific value, dry condition)	4922	Vd, % (flying particles, dry condition)	77,29
		Vdaf, % (flying particles, dry without ash condition)	78,46

Volume of export:

**5000-6000
tons per month**

with the possibility to increase the volume

**to 10000-12000 tons
a month in the future**
