About T.B.Fruit Company

We preserve all the most valuable things from nature to provide our customers with exclusively the best products for healthy life. The main principle of T.B. Fruit's work is to dedicate towards quality at all stages: from manufacturing products and providing services to running business processes. Our company keeps up with the times confidently, regularly implementing new technologies and modernizing the equipment. It is of utmost importance for T.B. Fruit Company to use only natural raw products grown in the regions deprived of industrial production. Today, T.B.Fruit is an indisputable leader of the Ukrainian market and one of the largest processors of fruits, berries and vegetables in Europe. T.B.Fruit Group of Companies consists of own gardens, 8 fruit and vegetable processing plants in Ukraine, Poland, and Moldova as well as transportation-logistic and engineering companies.

The basic areas of T.B. Fruit Group of Companies activity are:

- fruit growing: apple, cherry, raspberry, strawberry
- processing for B2B market: concentrated juices, direct extraction juices, purees, aroma, frozen vegetables and fruits
- processing for B2C market: NFC-juices (Galicia™) and reconstituted juices (Svitanok™)
- bulk cargo transportation

T.B. Engineering

- Maintenance of new enterprises construction
- Introduction of advanced and energy-saving technologies
- Production of stainless steel tank trucks, containers and caldrons

T.B. Pack LLC

T.B. Pack LLC specializes in production of wooden pallets. Due to the state-of-the-art equipment and high production capacity the company produces big amount of pallets within a short time. Automatic processes enable execution of orders of high complexity.

Quality

Export

Almost every day the Galicia™ gains new worshippers of natural and healthy directly expressed juices all over the world. The main component of the Galicia™ juices is their quality at all stages: from cultivating fruit and berries to packaging of finished products. These unique Ukrainian goods have already been appreciated in Poland, Slovakia, Moldova, the USA, China, the Netherlands, Israel, Azerbaijan, United Arab Emirates, Belarus.

International supermarket chains

Galicia[®]

100% NATURAL PRODUCT

Galicia[®]

100% NATURAL PRODUCT

Under Galicia™ we produce only natural juices and other products via direct press technology (NFC – Not From Concentrate). For this reason, we carefully select the best apples and berries grown in ecologically clean areas of Ukraine like Halychyna and Zakarpattia.

Direct press anticipates minimum processing and maximum preservation of natural microelements and vitamins. Its essence lies in gentle pasteurization – freshly squeezed juice passed through thermal conditioning in slow mode, it allows for the maximum preservation of the real natural taste, aroma and the color of the juices.

Galicia juice is produced without water, sugar, preservatives, colorants or flavoring of any kind. That is why shelf life of our products is only 12 months.

Our juices are produced only from the highest quality products

Production technology of direct pressed juices Galicia™

Raw material

Galicia juices are produced from fruits and vegetables grown by T.B.Fruit Company as well as other farmsteads. All raw material pass strict control for compliance with physical and chemical indicators.

Preparation of raw materials

Right after offloading fruits are taken for processing. Apples are washed; berries are rinsed under a special shower. Then the inspection of quality and sorting is held, letting only fullripe and sound fruits pass.

Juicing

Then fruits and berries are chopped, special, state of the art equipment is used to chop fruits and berries. Chopped fruits are pressed, using "Buch" high-technology presses.

Blending

Obtained fruit and berry juices are mixed, using a careful balance of each type of raw material to achieve the best taste, flavor and color.

Deaeration

After blending, the freshly-squeezed juice passes to a deaerator that prevents oxidation and browning by removing soluble air.

Pasteurization

At this stage the juice undergoes thermal conditioning in economical mode in order to preserve valuable components of the fruits, such as vitamins, anthocyanins and other useful elements.

Bottling

Ready hot juice is poured into bottles, corked and immediately chilled, then dried and labeled. Bottle with label. The juice is also poured into Tetra Pak packets aseptically.

Galicia™ Smoothie

Smoothie - a fruit drink which is made out of fruits, vegetables and berries. It is not only delicious, but is also a quite healthy beverage that can be used as a part of a diet and can even replace a meal. Because smoothies are made by grinding fruits, vegetable and berries, the vitamins in this delicious beverage is much higher than the vitamins in juice, which is very useful for digestion.

Smoothies, invented in middle of the last century in the USA, quickly became popular not only in U.S. but all over the world as more people began to care about their health and follow the principles of nutrition and healthy diet.

What is the difference between Smoothie by Galicia™ and other smoothies?

Galicia™ Smoothies are made of high quality NFC juices and purees using only natural ingredients with no sugar, water or preservatives. We use the latest direct pressed technology (which implies a minimal heat treatment) to preserve maximum flavor and beneficial properties of the fruits, vegetables and berries.
